CYBER SECURITY: CHECK YOUR POSTURE AND LIMBER UP

with the Virtual Security Manager service from Daisy

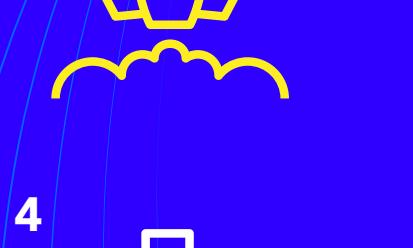

Compromise isn't always a good thing. Not when it comes to posture and ESPECIALLY when we're talking about cyber security posture. That's why it's important to understand the cyber threats facing your organisation and the measures you have in place currently to protect against them and keep them supple. But in a landscape that is continuously changing, keeping up to date with the latest recommendations can be almost impossible without a bit of assistance.

Enter the Virtual Security Manager service from Daisy. A way to assess and improve your cyber security posture with a helping hand from our advisors – on a basis that works for you.

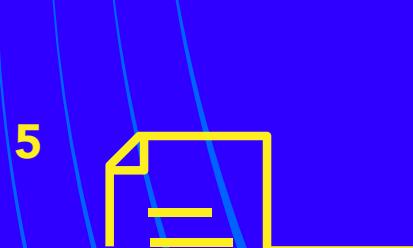

Daisy's Virtual Security Managers provide specific security expertise to your IT team and can:

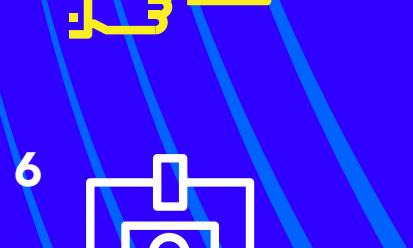

Work on your behalf to improve your existing posture and proactively protect against cyber security attacks.

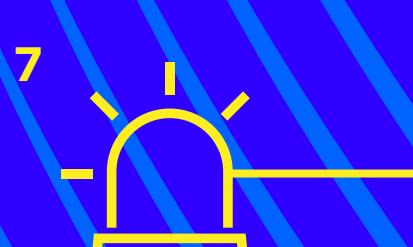

Develop and implement a strong threat management strategy with input from key areas of the organisation to help you prevent, detect and respond to threats.

Advise on the selection, design and deployment of security products and services.

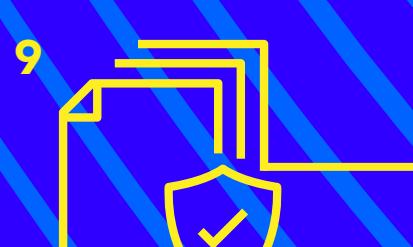

Plan security assessments and reviews, interpret the results and create resolution plans to help you make well-informed decisions on the risks you face.

Help you achieve compliance with relevant industry standards such as GDPR and Cyber Essentials (Plus).

Provide informal training to IT and security staff.

Provide oversight of breach response.

Review security information and event management (SIEM) and vulnerability management platforms, investigate alerts and make mitigation recommendations.

Create and maintain security policies, including incident response frameworks, employee security policies, password policies, and patching policies.

Create and maintain incident response plans to help you handle security incidents more effectively and appropriately.

With a broad cyber security portfolio spanning next-generation firewalls, endpoint security, DDoS protection, SIEM, vulnerability management, cyber-breach services and more, why not find out how else Daisy can help improve your security posture?
