

QUANTUM 365
BY DAISY

OPTIMISE COSTS AND MAXIMISE THE VALUE OF YOUR MICROSOFT 365 INVESTMENT

Quantum 365 by Daisy – in partnership with Bytes, has been designed to help organisations revolutionise their understanding and, more importantly the management of their Microsoft 365 estate. This innovative cloud-based cost optimisation and asset management tool offers unrivalled visibility across the Microsoft 365 cloud environment.

Quantum 365 allows organisations of all sizes to reduce costs, improve security and manage their user data estates more effectively than ever before. Providing this enriched data to business leaders is invaluable and ensures the right technology and security decisions are being made. These real-time insights allow organisations to evolve and provide an operational fluidity that previously did not exist.

Overview

Daisy provides everything you need to embed Microsoft 365, maximise its effectiveness and optimise costs over time, with transformative results for your business.

Quantum 365 by Daisy uses an intelligent, AI driven software as a service (SaaS) platform, hosted on Microsoft Azure to interrogate an organisation's Microsoft 365 deployment to gather subscription, usage, and license allocation data.

Linking all the gathered data, the solution applies its knowledge to determine optimum licensing, address unused or misused subscriptions, and provide recommendations on how best to extract the most value from Microsoft 365.

This solution addresses the challenges that businesses of all sizes face today regarding knowledge gaps in Microsoft 365 licensing and utilisation, and provides the necessary guidance to deliver significant cloud efficiencies.

Key benefits of Quantum 365 by Daisy:

- Improves ROI, enables cost savings by eliminating underutilised licences whilst optimising investments
- Delivers comprehensive data reporting to allow improved budgeting and spend forecasting
- Provides visibility of cost and consumption trends, user activity and behaviour by user, team, and department
- Stops overspending by recommending licence re-harvesting of unused or unassigned subscriptions. Further savings can be made via licence reclassification
- Nine out of ten organisations can realise between 5% and 15% savings on their annual spend
- Provides clarity and confidence when right-sizing current and future renewals
- Gives the option to implement policies to help with governance and compliance

QUANTUM 365 BY DAISY

Quantum 365 by Daisy is built around eight key modules:

- **Quantum 365 Core** – this base module interrogates the Azure Active Directory, Microsoft 365 subscriptions and licensing data and provides the following assessment information:
 - **Control Centre** – an intuitive dashboard that brings all the key customer metrics together in one place
 - **Financial Operations** – a summary of the Microsoft 365 licence investment showing immediate potential wastage and licence costs
 - **Groups** – insights regarding the groups within the organisation, how license allocation is distributed, and costs identified
 - **Devices** – provides detailed information around user endpoints, ownership, OS versions, compliance, and usage activity
 - **Users** – allows the deepest analysis of user activity and account data
 - **Usage** – detailed dashboards, both summarised and shown per user, department, division, and country
 - **Recommendations** – providing recommendations to be actioned to remove expiring licences, address underutilisation, and identify inactive accounts

Additional Modules

- **Alert Engine** – alerts based on any of the usage metrics such as licence expiry, increased costs, and budget limits
- **C-Level Dashboard** – a comprehensive set of dashboards providing summarised reporting around allocation, adoption, ROI, joiners and leavers
- **Risk, Security and Governance** – ensures visibility of Microsoft 365 services status, security scores, emerging threats, Azure Active Directory analysis, user behaviours, MFA status and many more
- **Licence Automation** – leveraging the core recommendations and analysing user consumption, this allows for the de-allocation of licences from users who no longer require them
- **Teams Insights** – provides Teams meetings (and Skype cloud) related interactions linked to business-based AI tags and reporting, giving insight into behaviours and potentially improvement in Teams utilisation
- **Call Quality Analytics** – technical analytics of individual calls and conferences allows improved troubleshooting of call quality issues, including round-trip delays, mean opinion score (MOS), signal levels and Wi-Fi, provides organisations with deeper insight to maximise the user experience
- **Modern Workplace** – home, office, and VPN worker dashboards. Providing device dashboards, geographical heatmaps and worker trends

Key features include:

- Microsoft Power BI dashboards
- Hosted in Azure UK
- Unlimited user accounts
- Automation and rules engine
- Secure portal with AD for user authentication

Have you thought about...?

Microsoft 365 by Daisy - Microsoft 365 (M365) provides the tools necessary to bring collaboration, communication and, by extension, productivity to everyone in an enterprise.

Data Science Assessment - to help you implement data science within your business and provide a clear strategic roadmap of what is achievable with your data and platforms.
